

Compile and run

Check, no problems

Running the program

Check, runs nice without problems.

Class diagram compliance with code

PlayGame has dependencies to Game when in fact they have associations. Otherwise it reflects the implementation.

Controller vs view

Check, done using enum constants.

Strategy pattern

The soft17 strategy is put in a separate class as specified in 1*Larman .26.1.
The strategy pattern is in general correctly implemented.

Duplicate code

Redundant code in Dealer replaced with a method but is not used in AmericanNewGameStrategy and InternationalNewGamesStarategy.
Code should reside in a class where it belongs and the information exist according to Information Expert pattern, 1*Larman 17.11.

Observer pattern

The observer pattern in itself is implemented correctly and the class diagram is updated.

Do you think the design/implementation has passed the grade 2 criteria?

Sure, just fix the duplicated code.
